

Quiz - Preventing Dump Truck Tip-Overs

1. It doesn't matter what type of truck you choose, if the tire pressure is equal on all sides.
☐ True ☐ False
2. When working with poorly flowing material, it is better to fill the truck full than it is to make many small loads because less dumps means less risk.
☐ True ☐ False
3. Personal safety isn't really a concern in dump truck tip-overs; the only real harm will be to the truck or the load material, not the workers.
☐ True ☐ False
4. Dump truck tipping is more common in semi-trailer rigs.
☐ True ☐ False

What Would You Do?

You are planning on using a pup trailer for work on a job with considerably uneven surfaces. Before beginning work, you check your equipment like normal, but you notice the hoist cylinder seems to be cracked. A co-worker suggests just going ahead with the pup trailer since it's only a very small crack. What would you do?
